2. Site Study

As per the instructions received from the Committee Members of Jai Jawan Co-operative Housing Society Ltd., we have examined the redevelopment proposal pertaining to Plot No 01 in Sector 17, Vashi, Navi Mumbai – 400703. The subject site measures approximately 1850 sq. m. and is delineated in accordance with the CIDCO approved layout plan.

A detailed site inspection was undertaken to evaluate the redevelopment potential of the property. As per the sanctioned Development Plan of Navi Mumbai, the land is designated for Residential Use and is abutted on the western side by 19.00M -wide Service Road and in addition to 38.00M-wide Development Plan (D.P.) Road. The site is surrounded by residential development on the eastern sides while the northern and southern side is surrounded by commercial development.

Observations during the preliminary site visit indicate that the surrounding area is predominantly commercial in character, with a noticeable presence of residential and public/semi-public land uses in close proximity. The subject plot benefits from excellent connectivity and seamless integration within the urban fabric, rendering it highly suitable for residential redevelopment.

As per the Modified Development Plan, sanctioned under Section 28 of the Maharashtra Regional and Town Planning Act, 1966, the existing land reservations in the vicinity remain unchanged.

The plot is adequately served by municipal infrastructure, with established connections to the municipal sewerage system and water supply network through the adjoining 19.00 M-wide Service Road.

The proposed redevelopment scheme shall strictly comply with the provisions of the Unified Development Control and Promotion Regulations (UDCPR), 2020, particularly those governing the redevelopment and reconstruction of dilapidated buildings within the NMMC jurisdiction. These provisions are applicable to buildings originally constructed by CIDCO that have deteriorated due to age, natural calamities, accidental fires, or have been demolished pursuant to lawful orders issued by the Municipal Commissioner.

17. Compensation to Existing Member

In the context of redevelopment, compensation refers to the benefit provided to an affected member or tenant which is required to relocate, be re-allotted, or undergo a change of use as part of the redevelopment scheme to ensure that such person is not placed in a valuation disadvantage position due to relocation, change of use, or modification of their existing premises.

In the event that any existing tenant shall be entitled to fair and reasonable compensation. Such changes may arise due to statutory bye-laws, planning regulations, design constraints, authority requirements, structural limitations, or any unforeseen site or regulatory conditions for the approval process.

Compensation may be structured in the form of monetary consideration based on prevailing market valuation, additional area benefits, alternative premises, or an appropriate combination thereof, depending upon feasibility and mutual agreement by appointed developer.

The PMC shall assist the concerned members in facilitating a transparent evaluation process and in securing fair compensation from the developer. Final terms shall remain subject to mutual consent and necessary approvals as per Society resolutions and applicable laws. However, the determination of whether such compensation is necessary for the purpose of redevelopment shall be decided by the Society members. The General Body shall have the right to decide, based on project requirements and overall feasibility, whether such compensation is required or not.

18. Benefits to developer

The Society's property is located at Sector 17, Vashi, the heart of Navi Mumbai, offering excellent connectivity, strong infrastructure, and sustained market demand. This reduces the developer's upfront capital investment and improves overall project feasibility. Further, the Society's rehabilitation requirement is relatively limited compared to the total development potential, allowing efficient planning and optimization of the sale component.

1. Higher Profit Margins

Prime locations command premium property prices. Even though land acquisition cost is avoided, the sale value of additional flats is significantly higher—leading to strong profitability.

2. No Land Acquisition

The biggest challenge in new developments for buying land is eliminated. In redevelopment, the initial land acquisition cost is not applicable, as the land is already leased by the Society.

3. High Demand & Faster Sales

Prime locations already have:

- Established infrastructure
- Good connectivity
- Social amenities (schools, hospitals, etc.)

The site enjoys high visibility and strategic positioning within a well-established residential and commercial hub.

4. Better Brand Positioning

Completing projects in premium areas enhances the developer's reputation and credibility in the market, helping in securing future high-value projects. The project has the potential to become a landmark development in the locality for decades, offering sustained brand value and commercial recognition to the developer.

5. Lower Marketing Costs

Since the location itself is a strong selling point, developers spend less on marketing compared to projects in developing areas. The prime location and strong commercial activity in the area, sale of units is expected to be market-driven and not burdensome.

6. Long-Term Value Appreciation

Projects in prime locations appreciate faster, benefiting both the developer (during sales) and enhancing goodwill among buyers.

19. Conclusion

Based on the technical, financial, and statutory assessment, the proposed redevelopment project is found to be feasible and beneficial for all stakeholders involved. The redevelopment will result in optimum utilization of land, enhancement of living standards, and overall improvement of infrastructure and aesthetics.

The project aligns with the applicable unified development control and promotion regulations (UDCPR) and offers a sustainable and economically viable solution for replacing the existing old and dilapidated structures. The expected benefits include additional area for existing occupants, modern amenities, improved safety, and long-term value appreciation. Financial analysis indicates that the project is commercially viable for the developer while ensuring adequate compensation and facilities for the existing members and reallocation of commercial unit to offices.

In conclusion, the redevelopment of the said property is strongly recommended, subject to compliance with statutory requirements, transparent agreements, and adherence to approved timelines and quality standards.

Note:

- The Project Management Consultant (PMC) has prepared an offer as per the project requirements and ensure the successful execution and completion of the project. Proposal has been framed after assessing all relevant technical, financial, and regulatory factors to ensure completion of redevelopment work.
- The detailed project configuration and calculations can be finalized only after obtaining necessary approvals and clearances from CIDCO and other statutory authorities.
- Priority for conversion of commercial units to office use in discussions with the appointed developer, with fair compensation based on market value. The offer for relocated shops shall be finalized based on the valuation provided by the appointed valuer and/or the developer's offer. The concerned members will be facilitated with a transparent evaluation process and in securing fair compensation from the appointed developer.
- The Society expects the Developer to provide an increase of 60% over the existing carpet area for all residential and commercial (as is where is basis) members as part of the redevelopment in the developer tender document.
- Due to compliance with applicable bye-laws, commercial units may be affected during redevelopment in terms of the width of the shop; however, the Appointed Developer shall determine and provide appropriate adjustments.
- Members shall be allotted flats on the same floor or a higher floor than their current premises, with a similar view, to the extent of design viability. In cases where multiple members on the same floor are entitled to similar view, the allotment shall be determined through a transparent lottery system and jodi flats/shop with similar view would be counted as one unit for lottery system, conducted with proper video recording and in the presence of the Registrar or an authorized representative. In case of Jodi flat/shop, developer shall provide in jodi flat/shop in new building to the extent of design viability.
- The compensation to be provided to an affected member or tenant which is required to relocate, be re-allotted, or undergo a change of use as part of the redevelopment scheme shall be governed by and determined in accordance with the provisions of Chapter 17 - Compensation to Existing Member.
- Considering all positive and negative factors, the project is economically viable and offers enhanced area benefits to the members. However, the project has the potential to enable a developer to establish a benchmark at the said location, but residential units in the said layout will restrict the developer to generate high revenue from offices. Additionally, the project is unlikely to attract adequate developer interest, rendering to

it a less BUA to Carpet Area ratio for incorporating 4 Staircase and lobby wastage to proceed under the present planning framework and project completion.

- The proposed offer in the feasibility is realistic and true with respect to the project.
- The offer proposed by PMC is in accordance with the minimum setback based on project feasibility, and the society along with PMC, will evaluate all technical and financial aspects and negotiate with the developer to secure the maximum possible benefit for the society.
- The saleable area rates have been determined based on the prevailing market rates.
- Carpet area (FSI) under standard old planning used to be 8 - 12% less than built up area. Carpet area including balcony under old planning used to be 15% more than built up area. Closed garages + private terraces + private garden is not part of F.S.I., hence compensation for same shall be decided mutually on case-to-case basis among parties concerned.
- Any expectation or circulation of additional or revised offers without proper reason may create uncertainty, affecting the quality control. It is therefore important that all further reviews and decisions are made in reference to the offer placed by the PMC.
